Workload and timeliness

Member	Active	Recorded complete	On time / eligible	Excluded
LOCAL QA employee	1	1	1 / 1	0

Monthly closures

—

Interpretation

Workload does not measure quality. Individual completion is independent of supervisor closure. Missing historical data is excluded, never scored as zero.

Metric definitions

Task cohort: Tasks matching the chosen filters and date basis; Cairo calendar days use exclusive next-day boundaries.

Office total: One row per task, regardless of participant count.

Workload: Active assignments per member; not an assessment of work quality or task complexity.

Individual completion: Server-recorded completion; checklist tasks require all steps. Supervisor closure is separate.

On-time rate: Eligible individual completions within the period and task cohort, on or before the frozen deadline / eligible completions.

Excluded: Completed assignments without recorded completion time or deadline. Missing is not zero.

Deadline: Frozen at tracking start; later edits retained in immutable history and never improve this baseline retroactively.

Pauses: Personal pause counts shown; no automatic deadline extension or elapsed-time deduction.

Completion rate: Done tasks / selected task cohort. Not individual productivity or quality.

Historical records: No completion dates are fabricated. Closed historical assignments remain unmeasurable.

Recorded durations: Individual completion hours require a known assignment creation timestamp. Ended personal pauses only; ongoing and historical unknown intervals are excluded.

Tracked due completion: Completed tracked assignments due in the period / tracked assignments due in the period, inside the selected task cohort. Historical unknown assignment starts are excluded.

Performance score: Deferred: no approved complexity model or documented human quality reviews.
